

## SITE SURVEY AND DRAWINGS ACCURACY

# Making life easier

Greenday offer a comprehensive range of drainage services for both domestic & commercial sectors

When we understand your needs, we organize a 'discovery handover' of your drain maintenance services. This means that we carry out an active inspection of all your drain assets.

Our Greenday engineers conduct a survey using your latest drawings (if available) and we check their accuracy, by inspecting the actual situation on the ground. We lift manholes and drain covers, check pipe conditions, conduct CCTV surveys if necessary and make new notes to update your drawings and documentation.

All this on-site investigation enables our engineers to set up your 'Drain Files' that accurately reflect your up-to-date situation. All your drawings and sketches are updated and corrected by our staff, your drains and manholes are numbered correctly, GPS referenced and documented for audits. This immediately reduces your stress because you are now in control when any kind of emergency happens. Up-to-date Drain Files help you to locate and solve emergency problems quickly. Greenday guarantees to keep files updated every time our engineers are called out or conduct a regular service call.

### BEHIND THE SCENES PREVENTION

Our engineers carry out regular inspections and scheduled 'preventive maintenance' visits in collaboration with staff. Rest assured, our work is carried out by fully trained and qualified engineers and operatives, using the latest technology and following the latest regulations and standards. Together, we're ahead of the problem. From our experience over the last 15 years we know what's likely to happen in your drains and in most cases we can prevent it before it becomes a problem.

### CONTROLLING YOUR COSTS

Well, what that means is that you spend less money on emergency calls. Really? Yes, because we carry out the preventive work before it gets to be a problem. Simple. But for you the biggest payback is not just the savings on service calls. No, it's the additional savings you get from continuous operation. And Greenday can reduce your drain repair costs with 'no-dig' low-cost alternatives. Our engineers are trained in Drain Rehabilitation solutions to repair a damaged drain or sewer. For example, we can fix a ruptured pipe using a new internal lining without the need to dig up and replace the pipe. This is a fast high-quality and low cost solution with excellent results that meet all environmental health and safety standards

### COLLABORATING WITH YOUR PROFESSIONALS & CONSULTANTS

If you're working with consultants, engineers and other professionals, Greenday can make it easier for your partners too. Our unique Drain Files and our incident reporting systems provide them with the professional information that they need to make key decisions and to audit our work. These ensure that your Professional Services partners are always kept 'in the loop' and updated on every significant operational event.

For more information on how we work actively with Professional Services companies (Consultant Engineers, Civil Engineers, AEC professionals, Facilities Maintenance Companies, etc.) see our separate brochure entitled 'Greenday Environmental – Servicing the Professionals.'
